

Emsisoft Anti-Malware 5.0 is here!

After extensive Beta testing and without the previous "a-squared" in the name: Emsisoft Anti-Malware 5.0 is here. This anti-virus suite has won many awards and uses two scanners, a behavioral analysis module and a surfing protection module to protect Windows PCs. The new version is fully x64 compatible, drastically simplifies the user interface and is now even more suitable for PC beginners looking for a high quality security solution. A new feature of Anti-Malware 5.0 is a file guard that scans files when they are downloaded or accessed, which advances the product to a full anti-virus system.

In brief:

- Emsisoft Anti-Malware 5.0 is here.
- The anti-virus suite provides protection from the dangers of the Internet
- Completely new programmed file guard and x64 behavior analysis
- Simplified user interface for a faster learning curve
- Full support for Windows 7 (100% x64 compatible)
- Link: <http://www.emsisoft.com/>

Salzburg, May 2010 - The arsenal of the Web criminals is full of Viruses, Trojans, Keyloggers, Spyware and Rootkits. New Malware arrives on the scene every day with the purpose of infiltrating the computers of unsuspecting users. The aim of these online gangsters: They want to include the infected computer in a criminal Botnet or want access to the private information of the PC owner.

Emsisoft Anti-Malware now offers its services to five million registered users to prevent this from happening. The program is able to detect all types of damaging software and either place them in quarantine or remove them completely. It has been tested many times by the independent organizations Malware Research Group and PC Security Labs and has achieved numerous victories in these tests. Two scan engines optimally matched to each other raise an alert as soon as your computer is threatened. The scanner uses a database that is updated several times a day and which now contains around 4 million signatures. An additional behavior analysis module provides even more safety: It uncovers new damaging software on the basis of its destructive behavior alone.

Emsisoft Anti-Malware 5.0: The latest new features

Emsisoft Anti-Malware Version 5.0 incorporates major changes. The one that is most relevant to the user: The user interface has been greatly simplified. This allows PC beginners to immediately start working with the software because it is now much easier to use. The scanner has also been integrated into the main window and can now be started even faster than before. Emsisoft Anti-Malware is also very light on computer resources and now uses only about 20 MB RAM in normal guard operation.

Other new features:

- **A new file guard:** To ease the load on the system, the Anti-Malware background guard previously only started when files in the system were opened or executed. The new file guard in version 5 has been written anew from scratch and now also offers the optional ability to scan files immediately after downloading and when they are copied or moved.
- **Full support for Windows 7:** Anti-Malware 5 offers full support for Windows 7, including new functions specific to Windows 7.
- **100% x64 compatible:** Anti-Malware 5.0 works equally well without limitations on both 32 and 64 bit systems. This makes Anti-Malware 5 one of the first "complete" behavior-blockers for x64 systems.
- **Extended behavior analysis:** A new addition is recognition of manipulation of the system security policies. The false alert filter has been further refined and the design of the alert window has been optimized.
- **Improved self-protection:** The self-protection in Anti-Malware 5 has been greatly optimized. This prevents Malware programs from changing or disabling the protection program.
- **Improved cleaning:** The cleaning routines in the software have been greatly improved. This means that all Malware found by the program can also be reliably deleted.
- **New game mode:** Users can now suppress all popups and alarms per mouse click if they wish to remain undisturbed during a game or while working with any other type of full-screen application.
- **No more need for registration when testing:** Emsisoft Anti-Malware 5 can now be tested free of charge without prior registration.
- **New free mode:** After a license or test period has expired, Anti-Malware 5 can still be used free of charge without the guard features. You are not compelled to purchase the product in order to test and clean your PC.
- **Hundreds of small improvements:** Numerous features requested by the users, such as optional shutdown of the computer after completion of a scan or a new central whitelist, have been added during Beta testing.

Emsisoft Anti-Malware 5.0 runs under Windows XP, Vista and Windows 7. The full version costs US \$40 for 1 year - including all signature and software updates. A 30-day test version is available free of charge.

ABOUT EMSISOFT

Emsisoft's ambition is to produce and market the best anti-virus software for personal and commercial users. The rapidly growing company is a leading European supplier of behavioral analysis technology for detecting damaging software such as Viruses, Trojans, Spyware, Keyloggers and other Malware. Over 5 million users worldwide make use of Emsisoft products.

The company was founded in 2003 by Christian Mairoll, realizing his vision of a virtual company: The 15 company employees are distributed all over the world but work together as if they are sitting together in a real office. Emsisoft was commended with the Austrian "Constantinus" IT prize in 2005 for this innovative business management concept.

The Emsisoft product range includes the security programs Emsisoft Anti-Malware, Mamutu, Online Armor Firewall, HiJackFree and MalAware.
